

Always assume a power line is energized. If you hit a power line or power pole with your vehicle or equipment, stay safe with these tips:

IF YOU CONTACT A POWER POLE

- 1 Break the contact.** Do what you can to break the electrical circuit. When possible, move the arm of your sprayer or auger, or whatever is contacting the line, away from the line.
- 2 Stay put and keep others away.** If you can't break the contact, stay in your vehicle, keep others away and call 911.
- 3 Call for help.** Call 911 or ATCO's electricity emergency line (1-800-668-5506) so crews can isolate and ground the line to make it safe to work around.
- 4 IT'S BEST TO STAY IN YOUR VEHICLE,** but if you must exit your vehicle, follow these steps to stay safe.
 - > **Call for help.** Call 911 or ATCO's electricity emergency line (1-800-668-5506).
 - > **Open the door** to your vehicle as wide as possible.
 - > **Jump from your vehicle,** landing with both feet together. **When jumping, make sure you don't touch the vehicle and ground at the same time.** If you jump with your feet apart, it could cause an electrical circuit to run through your body.
 - > **Shuffle or hop, don't step.** After you jump, shuffle or hop at least 10 metres away. **Ensure the heel of one foot never passes the toe of the other. Don't touch anything (vehicle or passengers) until you're clear.**

Hop or shuffle away from an energized line until you are 10 metres (33 feet) away

ATCO | ALWAYS THERE.
ANYWHERE.
